SUMMARY

Backend engineer with production experience building Python/Django, FastAPI, PostgreSQL, and AWS systems across EdTech and AI startups. Focused on LLM applications, document-grounded assistants, and agentic workflows. MS Computer Science candidate graduating August 2026.

TECHNICAL SKILLS

- Languages:** Python, SQL, TypeScript
- Backend:** Django (DRF), FastAPI, REST APIs, OpenAPI
- Databases:** PostgreSQL, pgvector
- Cloud & DevOps:** AWS (EC2, S3, Lambda), Docker, GitHub Actions
- AI / LLM:** OpenAI API, Ollama, agentic pipelines, structured extraction, prompt engineering
- Certifications:** AWS Certified Cloud Practitioner

EDUCATION

- William Jessup University** Sep 2024 – Aug 2026
Master of Science, Computer Science – GPA: 4.0
- KCA University** Apr 2018 – Dec 2022
B.S., Software Development – GPA: 3.6

EXPERIENCE

- Appstec America** Jan 2024 – Sep 2024
Software Engineer Remote
- Improved active engagement on an EdTech platform serving thousands of users by shipping React frontend optimizations and Django backend performance fixes across the stack.
 - Reduced p95 API latency from 520ms to 310ms (40% reduction) by optimizing PostgreSQL schema, adding indexes, and resolving N+1 query patterns.
 - Improved Stripe payment success rate by 20% by adding idempotent retry logic and PCI-DSS-aligned webhook handling.
 - Implemented SSO integration with Udemy Business, streamlining access for the user base and reducing login-related support volume.
- Gre8 Intelligence** Jan 2023 – Dec 2023
Backend Engineer (Contract) Remote
- Built an LLM-powered onboarding system in Django using the OpenAI API to classify businesses and recommend service packages, removing manual sales triage across pilot deployments serving 100+ end users.
 - Implemented a document-grounded Q&A assistant that ingested company documents to answer employee questions in natural language, reducing internal support volume for newly onboarded clients.
 - Shipped a browser-based video conferencing service using WebSockets with live transcription, retry logic, health checks, and structured logging to diagnose join failures in production.

PROJECTS

- Resume Agent** | *Python, FastAPI, Streamlit, Ollama, Qwen3, pdfplumber, Pydantic, pytest* GitHub
- Built a privacy-preserving AI resume review tool that runs locally with Ollama, grades resume-to-job fit, and proposes traceable edits without inventing experience.
 - Designed an 8-stage agent pipeline with model routing across Qwen3 4B for structured extraction and Qwen3 8B for reasoning-heavy fit analysis.
 - Shipped a Streamlit frontend with Server-Sent Events streaming and a 25-test pytest suite covering parsing, SSRF protections, and schema integrity.

Token Usage Tracker | *Python, OTLP, HTML/JS*

GitHub

- Built a local observability tool that monitors LLM API token consumption and costs across Claude Code and Gemini sessions with zero external dependencies.
- Shipped a live dashboard with per-model stats and burn-rate ticker for real-time spend visibility.

LEADERSHIP & COMMUNITY ENGAGEMENT

The Samburu Project

2025

Keynote Speaker & Featured Speaker

Los Angeles, CA

- Delivered keynote at the Splash Bash Gala at SmogShoppe in Los Angeles; event contributed to over \$315,000 raised for clean water, education, and community development in Samburu, Kenya.
- Featured speaker at the Hike for Water fundraiser, which raised approximately \$25,000 supporting water access in rural Kenya.

STEM Mentorship Program

2020 – 2022

STEM Mentor

Kenya

- Mentored high school students in Mathematics, Chemistry, and Computer Studies, building technical foundations for learners in underserved regions.
